

DESPERATE HOUSECAT RUKA A881266

At such a young age, **RUKA** has already been through more than most cats will experience in a lifetime. She arrived at AAC as a stray, with signs of head trauma and a serious eye infection in her left eye. She also had ringworm, which has been treated and is completely gone (she's had two negative fungal cultures). **RUKA** has made a full recovery from the head trauma and the eye infection. Her left eye is open and comfortable (it's not bothering her), and probably has some vision. The corneal scar tissue and cloudiness will likely remain for the rest of her life. **RUKA** is extremely social and playful, and gets along great with her foster siblings (adults and kittens). She is very used to being handled, and loves to snuggle with humans during downtime, as well as climb on their backs and shoulders. 😊 **RUKA** will be happiest in a home with a cat buddy.

- ◆ DOB: 4/12/2023, blue and white, spayed
- ◆ INTAKE: 5/19/2023
- ◆ Very social and playful
- ◆ Likes Belly Rubs
- ◆ Lap Cat; Snuggler
- ◆ Great with other cats and children; Probably fine with dogs
